

Platforms

The platforms are not any more assigned to the roadways permanently, but generally available as separate scenery elements. Their straight type is available as regular short version and, for installation in combination with other elements such as stations signs or platform roofs, as overlapping variant. Also new are the final elements with an angle perpendicular to the platform edge.

Next, there are 16 elements that prolong a platform to the stump side of a turnout.

The overall schema

The base for the dimensioning of the angles of the curves is a horizontal line with 0 °.

- | | |
|-----------------------------------|---|
| 00..16 - platforms in curves 45° | 01..17 - platforms in curves 22,5°+67,5° to north |
| 18..34 - straight platforms 22,5° | 19..35 - platforms in curves 22,5°+67,5° to south |
| 36..52 - straight platforms 45° | 37..53 - Widenings to north |
| 54..70 - straight platforms 67,5° | 55..71 - Widenings to south |

Included in this scheme are the vertical platforms on key "5" (08 is horizontal platform too) and as the No. 18/34 (press "1" / "9") the horizontal overlapping platforms.
